Oceanic

Preserving natural resources and reducing waste in our oceans is our prime goal. That is why we give marine litter a second life

FOR A CLEANER & SAFER OCEAN

A DEEP DIVE TO CREATE A WAVE OF CHANGE

We understand that plastic is one of the greatest threats to the ocean. To reduce plastic pollution in the oceans we source PET from sea coastal areas through our network of collectors and fishermen. By recycling we help reduce the environmental impacts and contamination, negate any adverse effects caused to the underwater biosphere and marine ecosystem and help to prevent the beauty of beaches and coastlines being marred.

Potential Benefits:

- Contributing to reducing plastic waste and micro plastic contamination of our oceans
- Helping to sustain the marine environment, improve ocean biodiversity and improve livelihoods of fishermen and collectors
- Strengthen drive towards cleaner beaches by reducing plastic pollution of the oceans
- Supplying full traceability of the source
- Providing necessary flexibility of defining proximity to the coastal areas for the collection of water bottles
